# INDEX TO AUTHORS

ANSON, M. L. Carboxypeptidase. I. The preparation of crystalline carboxypeptidase, 663
—. II. The partial purification of pro-carboxypeptidase, 777
—. III. The estimation of carboxypeptidase and pro-carboxypeptidase, 781
—. The estimation of cathepsin with hemoglobin and the partial purification of cathepsin, 565
—. The estimation of papain with hemoglobin, 561
— and NORTHROP, JOHN H. The calibration of diffusion membranes and the calculation of molecular volumes from diffusion coefficients, 575

BLAIR, H. A. The apparent distortion of brief rectangular electrical stimuli in nerve, 787
BLINKS, L. R. The effects of current flow on bioelectric potential. III. *Nitella*, 229
BONNER, JAMES. The growth and respiration of the *Avena* coleoptile, 1

CHASE, AURIN M. See HECHT, HAIG, and CHASE, 831
CLOWES, G. H. A., and KRAHL, M. E. Studies on cell metabolism and cell division. I. On the relation between molecular structures, chemical properties, and biological activities of the nitrophenols, 145
—. See KRAHL and CLOWES, 173
CRAIG, F. N. The respiratory quotient of seedlings of *Lupinus albus* during the early stages of germination, 449
CROZIER, W. J., and ENZMANN, E. V. Concerning critical periods in the life of adult *Drosophila*, 595
— and PINCUS, GREGORY. Analysis of the geotropic orientation of young rats. X, 111
—, WOLF, ERNST, and ZERRAHN-WOLF, GERTRUD. Critical illumination and critical frequency for response to flickered light, in dragonfly larvae, 363
—, —, and —. On critical frequency and critical illumination for response to flickered light, 211
—, —, and —. Temperature and critical illumination for reaction to flickering light. I. *Anax* larvae, 393
—, —, and —. II. Sunfish, 411
CURTIS, HOWARD J. Electric impedance of injured and sensitized red blood corpuscles, 105

EAGLE, HARRY, and HARRIS, TZVEE N. Studies in blood coagulation. V. The coagulation of blood by proteolytic enzymes (trypsin, papain), 543
ENZMANN, E. V. See CROZIER and ENZMANN, 595

FERRY, JOHN D. Statistical evaluation of sieve constants in ultrafiltration, 95
FETCHER, E. S., JR., LILLIE, R. S., and HARKINS, W. D. A method for the investigation of electrostenolysis, 671

FRENCH, C. S. The quantum yield of hydrogen and carbon dioxide assimilation in purple bacteria, 711

HAIG, CHARLES. See HECHT, HAIG, and CHASE, 831
HARKINS, W. D. See FETCHER, LILLIE, and HARKINS, 671
HARRIS, TZVEE N. See EAGLE and HARRIS, 543
HECHT, SELIG, HAIG, CHARLES, and CHASE, AURIN M. The influence of light adaptation on subsequent dark adaptation of the eye, 831
— and SHLAER, SIMON. The color vision of dichromats. I. Wave length discrimination, brightness distribution, and color mixture, 57
— and —. II. Saturation as the basis for wave length discrimination and color mixture, 83
HERČÍK, FERDINAND. Action of ultraviolet light on spores and vegetative forms of *Bacillus megatherium sp.*, 589
HERRIOTT, ROGER M. Inactivation of pepsin by iodine and the isolation of diiodo-tyrosine from iodinated pepsin, 335
—. See SEASTONE and HERRIOTT, 797

JACOBS, JOHN. Serological reactions of azo proteins derived from aromatic hydrocarbons and diaryl compounds, 353
JACQUES, A. G. The kinetics of penetration. XIV. The penetration of iodide into *Valonia*, 737
JAMESON, ELOISE. A phase rule study of the proteins of blood serum: the effect of changes in certain variables, 859
JAMESON, ELOISE, and ROBERTS, DOROTHY BROWN. A phase rule study of the proteins of the blood serum: a comparison of the proteins of human, rat, and horse serum, 475

KRAHL, M. E., and CLOWES, G. H. A. Studies on cell metabolism and cell division. II. Stimulation of cellular oxidation and reversible inhibition of cell division by dihalo- and trihalophenols, 173
—. See CLOWES and KRAHL, 145

LILLIE, R. S. See FETCHER, LILLIE, and HARKINS, 671

MACLEOD, JOHN. See PONDER and MACLEOD, 267, 433
MIRSKY, A. E. Coagulation of myosin by dehydration, 455
—. The coagulation of myosin in muscle, 461

NORTHROP, JOHN H. See ANSON and NORTHROP, 575

OSTERHOUT, W. J. V. Changes of apparent ionic mobilities in protoplasm. I. Effects of guaiacol on *Valonia*, 13
—. II. The action of guaiacol as affected by pH, 685

PARKER, G. H. Do melanophore nerves show antidromic responses? 851
PINCUS, GREGORY, and ZAHL, PAUL A. The biogenesis of primary sex hormones. I. The fate of estrins injected into the rabbit, 879
—. See CROZIER and PINCUS, 111
PONDER, ERIC, and MACLEOD, JOHN. The effect of hemolytic substances on white cell respiration, 267
— and —. The potential and respi-

ration of frog skin. I. The effect of the homologous carbamates. II. The effect of certain lysins, 433

ROBERTS, DOROTHY BROWN. See JAMESON and ROBERTS, 475

SEASTONE, C. V., and HERRIOTT, ROGER M. Immunological studies on pepsin and pepsinogen, 797

SHLAER, SIMON. See HECHT and SHLAER, 57, 83

SIMMS, HENRY S., and STILLMAN, NETTIE P. Substances affecting adult tissue *in vitro*. I. The stimulating action of trypsin on fresh adult tissue, 603

— and —. II. A growth inhibitor in adult tissue, 621

— and —. III. A stimulant (the "A factor") in serum ultrafiltrate involved in overcoming adult tissue dormancy, 649

SKOOG, FOLKE. A deseeded *Avena* test method for small amounts of auxin and auxin precursors, 311

SMITH, EMIL L. The influence of light and carbon dioxide on photosynthesis, 807

SPIEGEL-ADOLF, MONA. Polarization studies in collodion membranes and in synthetic protein-lipoid membranes, 695

STEINHARDT, JACINTO. Intensity discrimination in the human eye. I. The relation of $\Delta I/I$ to intensity, 185

STERN, KURT G. Spectroscopy of catalase, 631

STILLMAN, NETTIE P. See SIMMS and STILLMAN, 603, 621, 649

WALD, GEORGE. Pigments of the retina. II. Sea robin, sea bass, and scup, 45

WEISS, JOSEPH. Some remarks on the photosynthesis of green plants, 501

WHITAKER, D. M. The effect of hydrogen ion concentration upon the induction of polarity in *Fucus* eggs. I. Increased hydrogen ion concentration and the intensity of mutual inductions by neighboring eggs of *Fucus furcatus*, 491

WILBRANDT, W. The effect of organic ions on the membrane potential of nerves, 519

WOLF, ERNST, and ZERRAHN-WOLF, GERTRUD. Flicker and the reactions of bees to flowers, 511

— and —. Reactions of *Limulus* to illuminated fields of different area and flicker frequency, 767

—. See CROZIER, WOLF, and ZERRAHN-WOLF, 211, 363, 393, 411

ZAHL, PAUL A. See PINCUS and ZAHL, 879

ZERRAHN-WOLF, GERTRUD. See CROZIER, WOLF, and ZERRAHN-WOLF, 211, 363, 393, 411

—. See WOLF and ZERRAHN-WOLF, 511, 767

# INDEX TO SUBJECTS

ANAX larvae, temperature and critical illumination for reaction to flickering light, 393
Antidromic responses shown by melanophore nerves, 851
Auxin and auxin precursors, small amounts, deseeded *Avena* test method for, 311
*Avena* coleoptile, growth and respiration, 1
—, growth substance curvatures in light and dark, 283
— test method, deseeded, for small amounts of auxin and auxin precursors, 311
Azo proteins derived from aromatic hydrocarbons and diaryl compounds, serological reactions, 353

BACILLUS *megatherium sp.*, spores and vegetative forms, action of ultraviolet light, 589
Bacteria, purple, hydrogen and carbon dioxide assimilation, quantum yield, 711
Bees, flicker and reactions to flowers, 511
Bioelectric potential in *Nitella*, effects of current flow, 229
Biogenesis of primary sex hormones, fate of estrins injected into rabbits, 879
Biological activities, molecular structures, and chemical properties of nitrophenols, relation, 145
Blood, cell, red. *See* Erythrocyte.
— cell, white. *See* Leucocyte.
— coagulation by trypsin and papain, 543
— serum. *See* Serum.

CARBAMATES, homologous, effect on potential and respiration of frog skin, 433
Carbon dioxide and hydrogen assimilation in purple bacteria, quantum yield, 711
— dioxide and light, influence on photosynthesis, 807
Carboxypeptidase, crystalline, preparation, 663
—, pro-, partial purification, 777
— and pro-carboxypeptidase, estimation, 781
Catalase, spectroscopy, 631
Cathepsin, estimation with hemoglobin, and partial purification, 565
Cell, blood, red. *See* Erythrocyte.
—, blood, white. *See* Leucocyte.
— metabolism and cell division, 145, 173
Cellular oxidation stimulated and cell division reversibly inhibited by dihalo- and trihalophenols, 173
Chemical properties, molecular structures, and biological activities of nitrophenols, relation, 145
Coagulation, blood, by trypsin and papain, 543
—, myosin, by dehydration, 455
—, myosin in muscle, 461
Coleoptile, *Avena*, growth and respiration, 1
Collodion membranes and synthetic protein-lipoid membranes, polarization, 695

DEHYDRATION, coagulation of myosin by, 455

Diaryl compounds and aromatic hydrocarbons, serological reactions of azo proteins derived from, 353
Dichromats, color vision, saturation as basis for wave length discrimination and color mixture, 83
—, color vision, wave length discrimination, brightness distribution, and color mixture, 57
Diffusion membranes, calibration, and calculation of molecular volumes from diffusion coefficients, 575
Diiodo-tyrosine, isolation from iodinated pepsin, and inactivation of pepsin by iodine, 335
Dragonfly larvae, response to flickered light, critical illumination and critical frequency for, 363
*Drosophila*, adult, critical periods in life, 595

EGGS, *Fucus furcatus*, induction of polarity, effect of hydrogen ion concentration, 491
Electric impedance of injured and sensitized red blood corpuscles, 105
Electrical stimuli, brief rectangular, in nerve, apparent distortion, 787
Electricity, effects of current flow on bioelectric potential in *Nitella*, 229
Electrostenolysis, method for investigation, 671
Enzymes, proteolytic, coagulation of blood by, 543
Erythrocyte, injured and sensitized, electric impedance, 105
Estrins, fate after injection into rabbits, 879
Eye, human, intensity discrimination, 185
—, light adaptation, influence on subsequent dark adaptation, 831

FILTRATE, ultra-, serum, stimulant, A factor, involved in overcoming adult tissue dormancy, 649
Filtration, ultra-, sieve constants, statistical evaluation, 95
Flowers, flicker and reactions of bees to, 511
*Fucus furcatus* eggs, induction of polarity, effect of hydrogen ion concentration, 491

GEOTROPIC orientation of young rats, 111
Germination, early stages, respiratory quotient of *Lupinus albus* seedlings during, 449
Growth inhibitor in adult tissue *in vitro*, 621
— and respiration of *Avena* coleoptile, 1
— substance curvatures of *Avena* in light and dark, 283
Guaiacol, action on ionic mobilities in protoplasm, effect of hydrogen ion concentration, 685
—, effects on *Valonia*, 13

HEMOGLOBIN, estimation of cathepsin with, 565
—, estimation of papain with, 561
Hemolytic substances, effect on white cell respiration, 267
Homologous carbamates, effect on potential and respiration of frog skin, 433
Hormones, sex, primary, biogenesis, fate of estrins injected into rabbits, 879
Horse, human, and rat serum proteins, comparison, phase rule study, 475
Hydrocarbons, aromatic, and diaryl compounds, serological reactions of azo proteins derived from, 353

Hydrogen and carbon dioxide assimilation in purple bacteria, quantum yield, 711
— ion concentration, effect on action of guaiacol on ionic mobilities in protoplasm, 685
— ion concentration, effect upon induction of polarity in *Fucus furcatus* eggs, 491

IMMUNOLOGICAL studies on pepsin and pepsinogen, 797
Iodide, kinetics of penetration into *Valonia*, 737
Iodine, inactivation of pepsin by, and isolation of diiodo-tyrosine from iodinated pepsin, 335
Ionic mobilities in protoplasm, changes, 13, 685
Ions, organic, effect on membrane potential of nerves, 519

KINETICS of penetration, iodide into *Valonia*, 737

LARVAE, *Anax*, temperature and critical illumination for reaction to flickering light, 393
—, dragonfly, response to flickered light, critical illumination and critical frequency for, 363
Leucocyte respiration, effect of hemolytic substances, 267
Light adaptation of eye, influence on subsequent dark adaptation, 831
— and carbon dioxide, influence on photosynthesis, 807
— and dark, growth substance curvatures of *Avena* in, 283
—, flickered, critical frequency and critical illumination for response to, 211
—, flickered, critical illumination and critical frequency for response in dragonfly larvae, 363
—, flickering, temperature and critical illumination for reaction to, in *Anax* larvae, 393
Light, flickering, temperature and critical illumination for reaction to, in sunfish, 411
—, ultraviolet, action on spores and vegetative forms of *Bacillus megatherium sp.*, 589
*Limulus*, reactions to illuminated fields of different area and flicker frequency, 767
Lipoid-protein membranes, synthetic, and collodion membranes, polarization, 695
*Lupinus albus* seedlings, respiratory quotient during early stages of germination, 449
Lysins, effect on potential and respiration of frog skin, 433

MAN, eye, intensity discrimination, 185
—, rat, and horse serum proteins, comparison, phase rule study, 475
Melanophore nerves, antidromic responses, 851
Membrane potential of nerves, effect of organic ions, 519
Membranes, collodion, and synthetic protein-lipoid, polarization, 695
—, diffusion, calibration, and calculation of molecular volumes from diffusion coefficients, 575
Metabolism, cell, and cell division, 145, 173
Molecular structures, chemical properties, and biological activities of nitrophenols, relation, 145
— volumes, calculation from diffusion coefficients, 575
Muscle, myosin, coagulation, 461
Myosin, coagulation by dehydration, 455
— in muscle, coagulation, 461

NERVE, apparent distortion of brief electrical rectangular stimuli in, 787

Nerves, melanophore, antidromic responses, 851
—, membrane potential, effect of organic ions, 519
*Nitella*, effects of current flow on bioelectric potential, 229

ORGANIC ions, effect on membrane potential of nerves, 519
Orientation, geotropic, of young rats, 111
Oxidation, cellular, stimulation by dihalo- and trihalophenols, 173

PAPAIN, coagulation of blood by, 543
—, estimation with hemoglobin, 561
Penetration, kinetics, iodide into *Valonia*, 737
Pepsin, inactivation by iodine, and isolation of diiodo-tyrosine from iodinated pepsin, 335
— and pepsinogen, immunological studies, 797
Pepsinogen and pepsin, immunological studies, 797
Phase rule study of serum proteins, effect of changes in variables, 859
— rule study, serum proteins, human, rat, and horse, 475
Phenols, dihalo- and trihalo-, stimulation of cellular oxidation and reversible inhibition of cell division, 173
—, nitro-, relation between molecular structures, chemical properties, and biological activities, 145
Photosynthesis, influence of light and carbon dioxide, 807
— of green plants, 501
Pigments, retina, sea robin, sea bass, and scup, 45
Plants, green, photosynthesis, 501
Polarity in *Fucus furcatus* eggs, induction, effect of hydrogen ion concentration, 491
Polarization, collodion membranes and synthetic protein-lipoid membranes, 695
Potential, bioelectric, in *Nitella*, effects of current flow, 229
—, membrane, of nerves, effect of organic ions, 519
— and respiration of frog skin, 433
Protein-lipoid membranes, synthetic, and collodion membranes, polarization, 695
Proteins, azo, derived from aromatic hydrocarbons and diaryl compounds, serological reactions, 353
—, serum, human, rat, and horse, comparison, phase rule study, 475
—, serum, phase rule study, effect of changes in variables, 859
Proteolytic enzymes, coagulation of blood by, 543
Protoplasm, ionic mobilities, changes, 13, 685

RESPIRATION and growth of *Avena* coleoptile, 1
— and potential of frog skin, 433
—, white cell, effect of hemolytic substances, 267
Respiratory quotient of *Lupinus albus* seedlings during early stages of germination, 449
Retina, pigments, sea robin, sea bass, and scup, 45

SCUP, retina, pigments, 45
Sea bass, retina, pigments, 45
— robin, retina, pigments, 45
Seedlings, *Lupinus albus*, respiratory quotient during early stages of germination, 449

Serology, reactions of azo proteins derived from aromatic hydrocarbons and diaryl compounds, 353
Serum proteins, human, rat, and horse, comparison, phase rule study, 475
—, proteins, phase rule study, effect of changes in variables, 859
— ultrafiltrate, stimulant, A factor, involved in overcoming adult tissue dormancy, 649
Sex hormones, primary, biogenesis, fate of estrins injected into rabbits, 879
Skin, frog, potential and respiration, 433
Spectroscopy of catalase, 631
Spores and vegetative forms of *Bacillus megatherium sp.*, action of ultraviolet light, 589
Statistical evaluation of sieve constants in ultrafiltration, 95
Sunfish, temperature and critical illumination for reaction to flickering light, 411

TEMPERATURE and critical illumination for reaction to flickering light in *Anax* larvae, 393
— and critical illumination for reaction to flickering light in sunfish, 411
Tissue, adult, *in vitro*, growth inhibitor, 621
Tissue dormancy, adult, stimulant, A factor, in serum ultrafiltrate involved in overcoming, 649
—, fresh adult, stimulating action of trypsin *in vitro*, 603
Trypsin, coagulation of blood by, 543
—, stimulating action on fresh adult tissue *in vitro*, 603
Tyrosine, diiodo-, isolation from iodinated pepsin, and inactivation of pepsin by iodine, 335

ULTRAFILTRATE, serum, stimulant, A factor, involved in overcoming adult tissue dormancy, 649
Ultrafiltration, sieve constants, statistical evaluation, 95
Ultraviolet light, action on spores and vegetative forms of *Bacillus megatherium sp.*, 589

VALONIA, effects of guaiacol, 13
—, kinetics of penetration of iodide, 737
Vision, color, dichromats, saturation as basis for wave length discrimination and color mixture, 83
—, color, dichromats, wave length discrimination, brightness distribution, and color mixture, 57
—, intensity discrimination in human eye, 185
